FreshTrace

Farm-to-Table Fresh Produce with Dynamic Freshness Pricing

Project Description

FreshTrace is a traceable fresh produce e-commerce marketplace designed to address food waste and customer trust issues in perishable e-commerce, including organic fruits, vegetables, and specialized bakery products. Traditional e-commerce platforms often lack dynamic, time-based pricing mechanisms that account for product freshness and spoilage, leading to significant food waste.

The platform introduces a dynamic pricing mechanism that automatically adjusts product prices based on batch age and freshness index, enabling automated smart markdowns.

Key Features

1. **Batch & Freshness Lifecycle Engine:** Inventory batches are tagged with harvest or packing dates and assigned dynamic decay tiers, such as Day 1 at 100% price, Day 3 at 70% price, and Day 5 at flash-sale pricing.
2. **Origin Traceability Badge:** Each product batch includes QR-based tracking metadata, such as origin farm, harvest date, and estimated shelf life.
3. **Subscription & Custom Harvest Box:** Customers can schedule weekly deliveries and customize their produce boxes based on fresh batch availability.

Unique Value Proposition

Real-time freshness grade tracking and decay-based dynamic pricing to eliminate food waste.
